PROFILE

SAP Consultant with 10+ years of experience delivering functional support, system improvements, and process optimisation across SAP supply chain and logistics environments. Currently working as an SAP AMS Consultant supporting a wide portfolio of clients across several industries, including wholesale, construction, manufacturing, beverages, and production.

Specialising primarily in SAP SD while working cross-functionally with MM, PP, LE, and FICO, with strong experience in end-to-end business processes, troubleshooting complex issues, and delivering system enhancements in live production environments. Experienced in translating business requirements into functional specifications and coordinating with technical teams to deliver controlled system changes, integrations, and automation solutions.

Background includes SAP ECC implementations, S/4HANA transition support, EDI and API integrations, process automation, and data-driven improvements. Combines strong functional consulting capability with technical skills in automation, scripting, and system integration, enabling efficient delivery of solutions across complex SAP landscapes.

Known for strong analytical skills, stakeholder communication, and the ability to quickly understand business processes and deliver practical solutions in support and project environments.

EMPLOYMENT HISTORY

The Config Team Limited

05/2024 – Present

SAP AMS Consultant

Trusted SAP support partner delivering day-to-day client requirements across SD, MM, PP, and FICO for a portfolio of 12+ active clients spanning wholesale, construction, beverages, and production industries on both SAP ECC and S/4HANA.

Responsible for delivering service requests, incident resolution, problem management and minor system changes in line with ITIL practices and SLAs.

Work closely with functional consultants, technical teams and business stakeholders to translate requirements into functional specifications, support testing, troubleshoot issues, and help deliver controlled changeovers and effective solutions. Current responsibilities include:

- Managing SAP support activities across multiple modules and clients
- Analysing incidents and requests, identifying root causes and proposing solutions
- Writing functional specifications and supporting technical delivery
- Coordinating testing, documentation and change implementation
- Liaising with stakeholders and third parties to resolve issues
- Supporting workshops, demonstrations and requirement gathering where needed
- Contributing to process improvement and reduction of repeat incidents
- Working across diverse industries and SAP versions

WAGO Limited Rugby

05/2019 – Present

SAP Consultant

Rugby

During my tenure at WAGO, I played a pivotal role in orchestrating and executing a comprehensive SAP ECC implementation project, with a later progression to S/4HANA, actively engaging with modules such as SD, PP, MM, LE, and FICO. This encompassed comprehensive support, including module enhancements, data science tasks, query design, mass changes, testing, and meticulous documentation. Notably, I played a pivotal role in process automation, integrating SAP systems with APIs, RPAs, EDI, and orchestrating user training.

Configured and enhanced SAP SD processes including pricing, taxation (including complex Brazilian NFe models), order profiles, consignment, triangular subcontracting operations, and EDI integrations. Gathered and documented business requirements, produced functional specifications, and contributed to the analysis and redesign of integrated sales and supply chain processes.

Worked with MM components including Material Master, Vendor Master, and procurement processes, supporting purchasing and inventory optimisation. Performed inventory analysis including ABC/XYZ classification, participated in stock-taking activities, and supported MRP planning including forecasting, automatic PR/planned orders, and subcontractor procurement.

Developed process automation and data-driven improvements using tools such as Power Automate, scripting, VBA, and Power Apps. Integrated SAP with external systems via APIs, RPA, and EDI, improving data exchange and operational efficiency. Also supported EDI/IDOC implementations, e-commerce integrations, and coordinated local testing activities during the S/4HANA migration.

WAGO Brazil Jundiai

09/2015 – 05/2019

SAP Consultant

Jundiai

Supported a full ERP rollout with a focus on SD, PP, MM and WMS, alongside end-user and admin support across multiple systems. Contributed to internal portal development, BI improvements, infrastructure planning and site move activities.

EDUCATION

Fatec

01/2014 – 01/2018

System Analysis and Development

SKILLS

SAP Functional & Business Process Expertise

SAP ECC, SAP S/4HANA (support and transition exposure), SAP IMG configuration, SAP Solution Manager (SolMan), LSMW, SAP Query and reporting, SAP Analytics Cloud. Hands-on end-to-end process knowledge across core supply chain and finance processes with cross-module integration experience (SD, MM, PP, LE, FICO).

Incident and service request management, functional troubleshooting, root cause analysis, change delivery, and SLA-based support in structured environments.

Testing and delivery experience including TestRail, functional testing, user acceptance testing coordination, documentation, and controlled system changes.

Master data governance, master data cleansing, query modelling, business process analysis, and continuous improvement initiatives.

Integration, Automation & Data

Process automation using Microsoft Power Platform (Power Automate, Power Apps), scripting, and SAP automation tools.

API development and system integrations including RESTful services, GraphQL, JSON/XML data formats, EDI/IDoc integrations, and automation pipelines.

Data analytics and reporting using Power BI, Power Query, SAP Analytics Cloud, and custom data-driven dashboards.

AI-assisted development and automation using tools such as ChatGPT, Claude, GitHub Copilot, and enterprise AI platforms, including integration of AI into development workflows and automation pipelines.

Development, Platforms & Engineering

Languages and scripting: C, C++, JavaScript (ES6), TypeScript (Office Scripts / Excel Online), Node.js, Python, PHP, SQL (PostgreSQL), NoSQL, ABAP (debugging and issue analysis).

Platforms and tools: Git, Docker, Linux, PowerShell, Jenkins, CircleCI, GitHub Actions, AWS, Azure Cloud, Google Cloud Platform.

DevOps and engineering concepts including CI/CD pipelines, end-to-end system integration, automation-first development, distributed systems, and IoT integrations.

Security and access management including Active Directory administration, SAP user security concepts, access framework design, and exposure to system security testing and cryptographic principles.

HOBBIES

When not fixing stuff or putting out the fire I'm likely out hiking, camping, working on a side project, rock climbing, or reading Lord of the Rings that one more time. I also enjoy working on side projects such as 3D printing, CAD modelling, programming, and home automation. Other hobbies include FPV drone piloting, DIY projects, painting and crafts. Recently I've also been spending more time cooking, experimenting with things like homemade pasta, curries, and other dishes.
